

Dan Pearce

Professional Summary

Junior Developer currently working at Computershare, contributing to the development and maintenance of business-critical applications within a regulated financial environment.

I bring a strong engineering mindset shaped by prior experience in application and systems support, allowing me to approach development with a focus on reliability, maintainability, and safe change. I contribute to code changes, defect fixes, testing, and releases, working closely with senior developers and QA to deliver stable, well-designed solutions.

I'm actively developing my skills across C#, .NET, SQL, and modern front-end development, with a strong interest in building clean, scalable software and continuously improving my technical depth.

Employment History

Junior Developer, Computershare, Bristol

JANUARY 2026 – PRESENT

- Contribute to the development and enhancement of business-critical applications used across the organisation
- Implement code changes and defect fixes under the guidance of senior developers
- Support testing activities and participate in controlled releases to production
- Collaborate with developers, QA, and stakeholders to ensure solutions are reliable and maintainable
- Apply strong problem-solving and debugging skills to identify root causes and prevent recurring issues
- Produce clear technical documentation to support ongoing development and system understanding

Application Support Analyst, Computershare, Bristol

JANUARY 2025 – FEBRUARY 2026

- Providing Tier 2/3 technical support across Shared Services applications, ensuring uptime, stability, and data integrity for multiple business-critical financial applications.
- Develop, test, and maintain automation scripts to streamline secure file transfers, encryption workflows, and operational monitoring.
- Investigate complex encryption and data-flow issues involving encryption, encoding, and data-format discrepancies between integrated systems.
- Established the global standard for our SharePoint site structure and design, developing a reusable template adopted by multiple teams.
- Expanded expertise in BI tooling and REST API integrations for automated reporting and insights.

Remote Site Support Analyst, Computershare, Bristol

MARCH 2023 - JANUARY 2025

- Delivered onsite and remote support, focusing on end-user support with troubleshooting.
- Maintained identity and access systems, Windows 10/11 builds, and managed endpoint deployment and device management.
- Supported thin-client and virtual desktop environments, managing firmware rollouts and testing environments.
- Provided technical coverage across global sites, including international travel for large-scale deployments and operational handovers.

Skills

Software Development

- C#, .NET fundamentals, LINQ, SQL
- JavaScript, React, RESTful APIs
- Python and backend development concepts
- Writing clean, maintainable, and testable code

Development Practice

- Debugging and defect resolution
- Supporting testing and release processes
- Code reviews and collaborative development
- Documentation and knowledge sharing

Systems & Application Knowledge

- Understanding of production environments and operational risk
- Application integration and data flow awareness
- Designing changes with stability and maintainability in mind

Automation & Data

- Automation of development and operational workflows
- Working with structured data and APIs
- Reporting and data visualisation concepts

Security & Networking

- Secure coding and data handling principles
- Networking fundamentals and system connectivity
- Awareness of security considerations in financial systems

Tools & Ways of Working

- Git-based version control
- API testing and debugging tools
- Agile and iterative development approaches

IT Support Engineer, Impact IT Solutions, Bristol

JUNE 2022 - MARCH 2023

- Delivered 1st/2nd-line support to clients across a wide range of network and server environments.
- Built and configured AD/Azure AD accounts, group policies, and custom Windows 10/11 imaging pipelines.
- Authored knowledge base articles and SOPs to streamline troubleshooting and improve consistency across engineers.

Sainsbury's, Bristol

JULY 2016 - JUNE 2022

- Progressed from General Assistant to Merchandising Controller, managing store layout changes, leading small teams, and supporting sales and stock control optimisation.

Professional Development

Actively developing software engineering skills through structured learning on Pluralsight, with a focus on C#, .NET fundamentals, LINQ, SQL, MVC patterns, and modern front-end development using React and TypeScript. This learning is complemented by hands-on practice through personal and portfolio projects.

CompTIA Security+ (SY0-701) - In progress, building a strong understanding of secure software development practices, risk management, and security principles.

CompTIA Network+ (N10-009) - In progress, strengthening core networking knowledge, system connectivity concepts, and foundational infrastructure awareness.

Education

Code Institute, Remote

DECEMBER 2021 - NOV 2023

Diploma in Full Stack Software Development (Advanced Front End)

Merit Grade - Diploma has been credit-rated by The University of the West of Scotland. They have levelled it at Level 8 on the Scottish Qualification Framework. This is the equivalent of level 5 on the Regulated Qualifications Framework (RQF) and Level 5 on the European Qualification Framework (EQF).

Courses

MD-100: Windows 10, Microsoft

OCTOBER 2022 - NOVEMBER 2023
